What's New in Alfabet 11.12

GA: June 2026 (11.12.0) and September 2026 (11.12.1)

Consolidated Strategic Themes

Streamlined strategic initiatives for **agility**, **understandability** and **effective communication**

Alfabet 11.12.0 Release Highlights

Release Highlights:

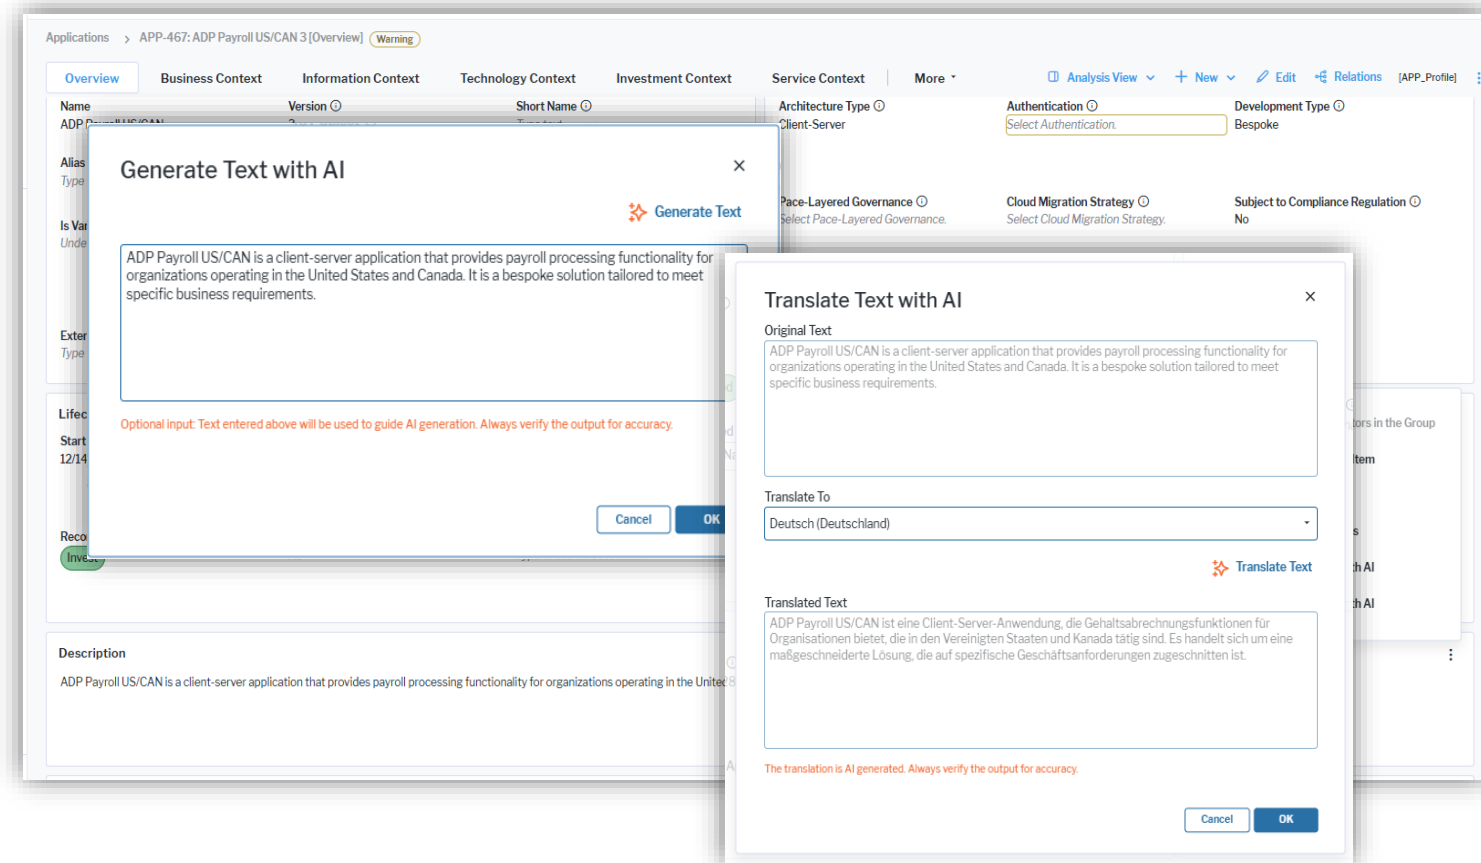

- Smart AI-powered content and translation
- Sankey Diagram
- Compact Mode
- Shareable and Embedded Alfabet Views
- Enhancements to Notifications
- Migration to .NET 10
- Content pages with related object information
- Automatic Indicator Recalculation

Leverage AI to increase team productivity

AI-Powered Text & Translation

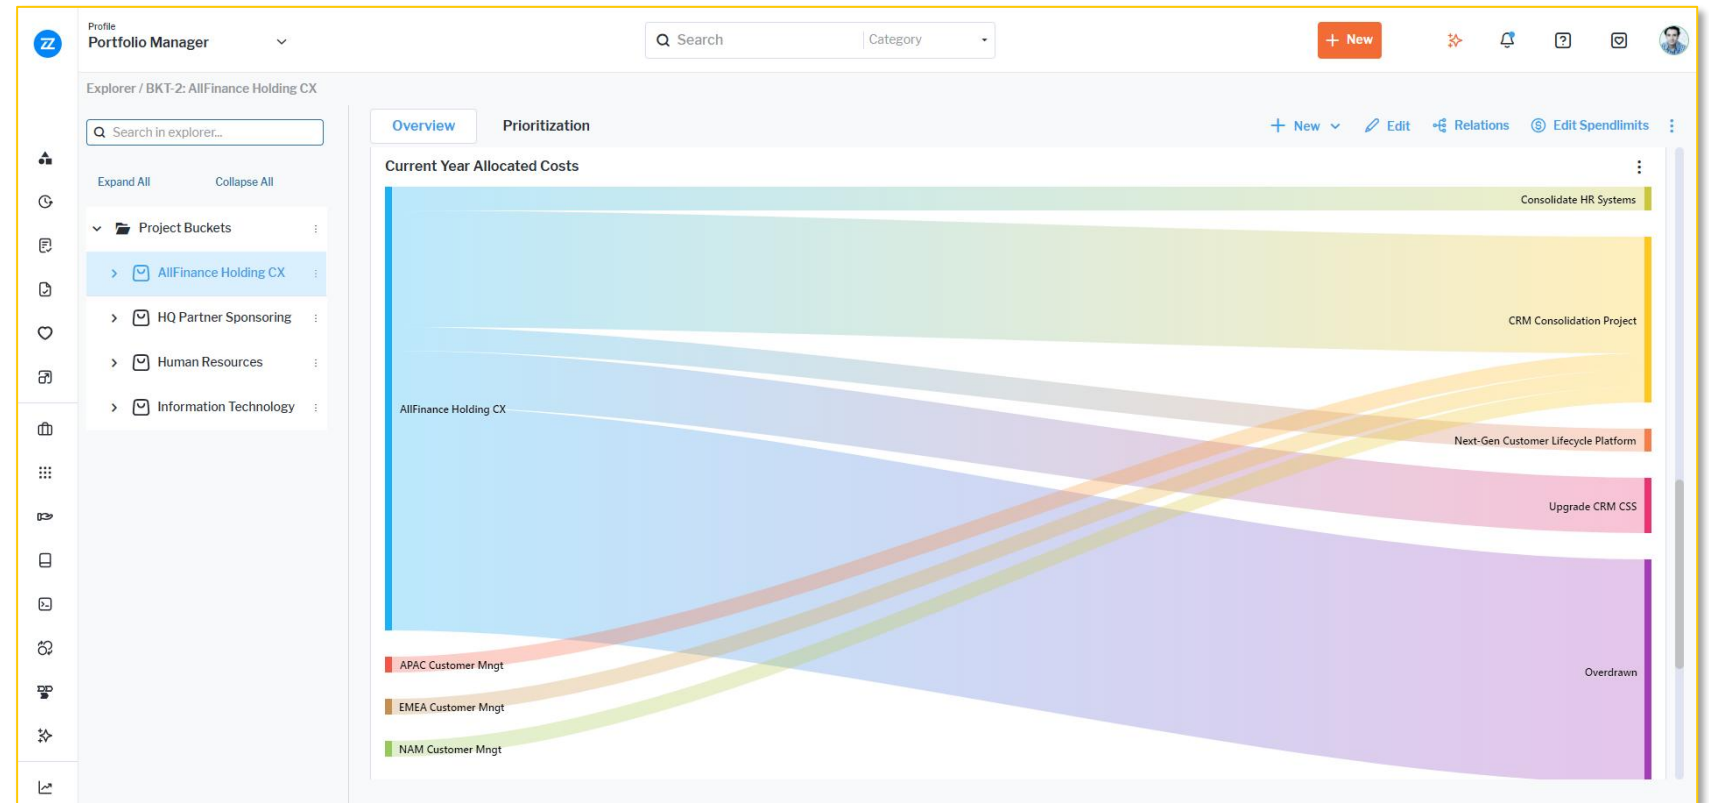

- **Context Aware:** Analyze available context (e.g., titles, metadata, configuration comments) and generates clear, relevant, and stylistically consistent text in the **language of the logged in user**
- **Clearer Communication:** Users interact with content in their native language, reducing misinterpretation and improving decision-making.
- **Secure by Design:** Translations are handled through a secure process, ensuring sensitive information stays protected and compliant.
- **Increased Efficiency:** Faster understanding of key information minimizes training needs and boosts productivity.

See how the enterprise flows

Sankey Diagram

- Visualize complex relationships and flows in an intuitive Sankey diagram.
- Understand dependencies, handoffs, and bottlenecks at a glance.
- Explore multi-step relationships across several levels for deeper insight.
- Hover for contextual details that make analysis faster and easier.
- Typical use cases: Application Rationalization, Technology Lifecycle Management, Investment Allocation, Roadmap Alignment, Migrations ...

For power users, every pixel counts

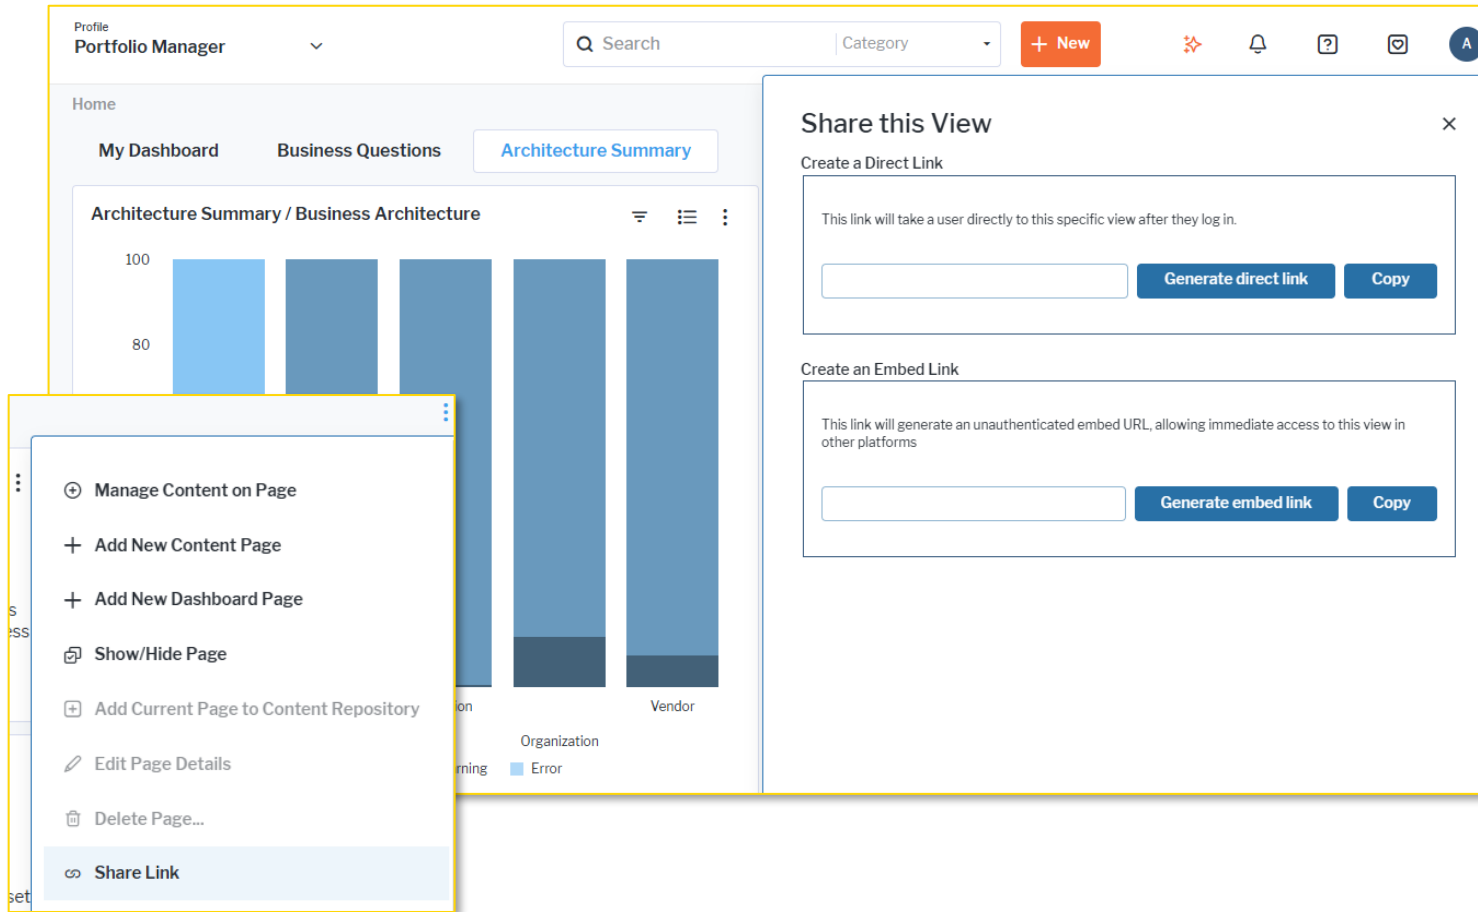

Compact Mode

- New option in **User Settings** lets individuals choose between **Compact Mode** and Standard Mode.
- Displays more rows in tables and additional attributes during drill-downs for deeper insights at a glance.
- Condensed content area, masthead, headers, and left navigation create a cleaner, more efficient workspace.

Extend Alfabet's rich insights across the organization

Embedding Alfabet Content

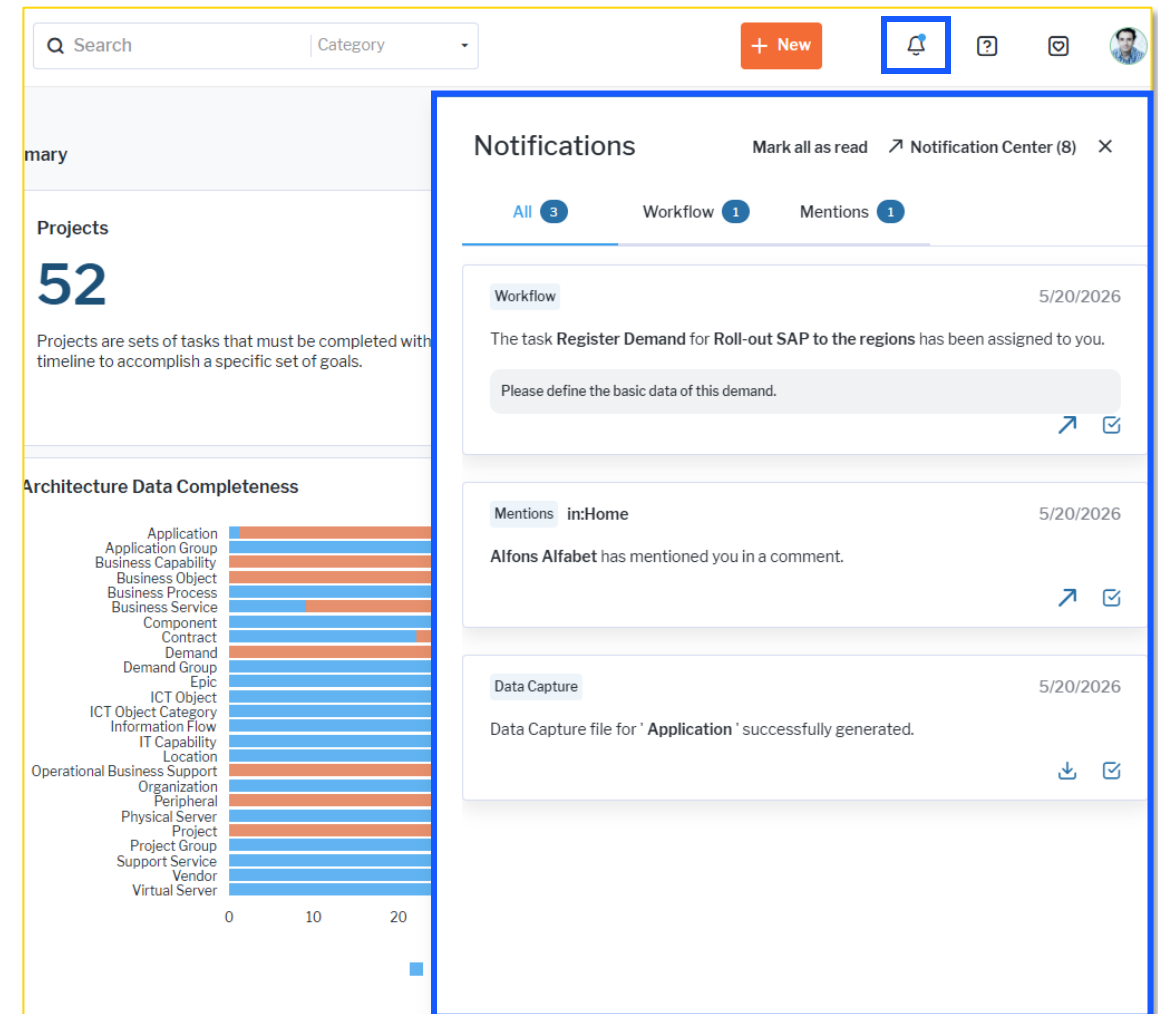

- The concept of External Links has been revitalized – with improvements in terms of view context and filters being saved in the links
- Anonymous User concept is utilized to generate links.
- **Direct Links:** Access Alfabet application as a Visitor or as an Authenticated User based on allowed External Link policy.
- **Embedded Links:** Access the view as Viewer without any authentication flow. Only the view is rendered.

Stay on top of collaborations and administrative responsibilities

Enhancements to Notifications

- Improved design and user experience with consolidated menus within the notification panel
- Get notified in the masthead upon receiving a new notification
- Improved handling of user and administrative functionalities
 - Data Capture, ADIF, and Job Schedule notifications are only shown under Administrative profiles
- Notifications for collaborations and mentions are now available
 - Navigation takes the user directly to the view
- Updated user interface design for the notification center

Other New Features

- **Migration to Microsoft® .NET 10**

Microsoft® support for .NET Framework 8 ends on November 10, 2026. Alfabet 11.12.0 has therefore been migrated to .NET Framework 10. This change also enhances overall system performance. All embedded third-party components were updated to the latest versions supporting .NET Framework 10.

- **Content pages with related object information**

Content areas displaying object information can be configured to include data about related objects. Users can edit the base object through inline editing, eliminating the need to switch between different content areas and improving efficiency.

- **Automatic indicator recalculation**

Solution designers with access to Alfabet Expand can configure content items that display indicator cards, evaluation cards, or object class property groups containing calculated indicators to automatically recalculate indicators without requiring user interaction.

Alfabet 11.12.1 Release Highlights

Release Highlights:

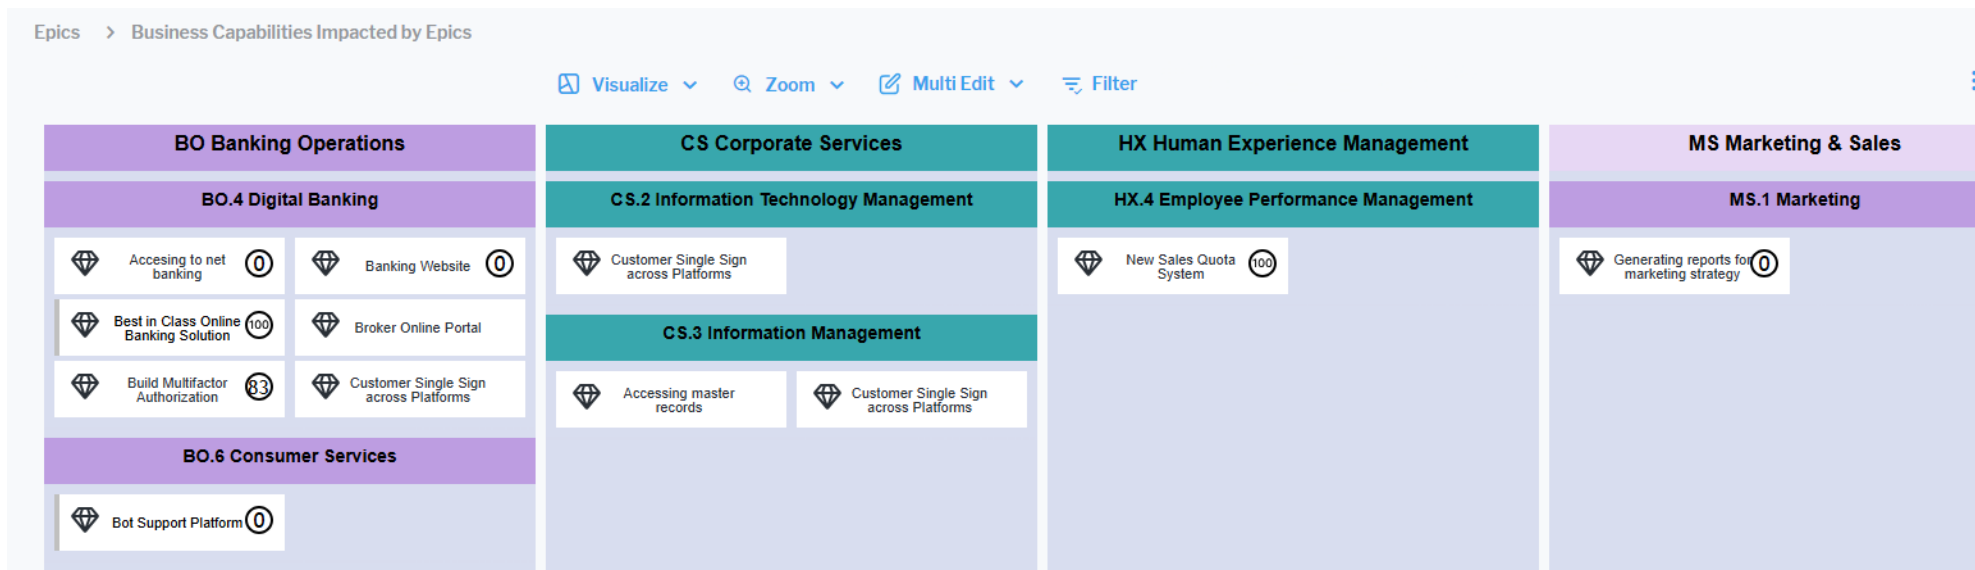

- Business Capability Investment Analytics
- Sankey Diagram – Project Bucket Spend
- Sankey Diagram – Current Year Allocated Costs
- Enhanced SLA Specification
- New Project Portfolio Finance Dashboard

Ensure IT execution is aligned with business strategy

Business Capability Investment Analytics*

- Projects, demands and epics are associated to their affected business capabilities to highlight impact of specific initiatives
- Highlight mission-critical business capabilities to assess if they are receiving sufficient investment
- Enrich the analysis with a range of relevant KPIs
- See where investments intersect to better leverage resources and align investment with strategic capabilities

Required extension packages:

- “Strategic Portfolio Management” for Business Capabilities Impacted by Demands
- “Lean Portfolio Management” for Business Capabilities Impacted by Epics

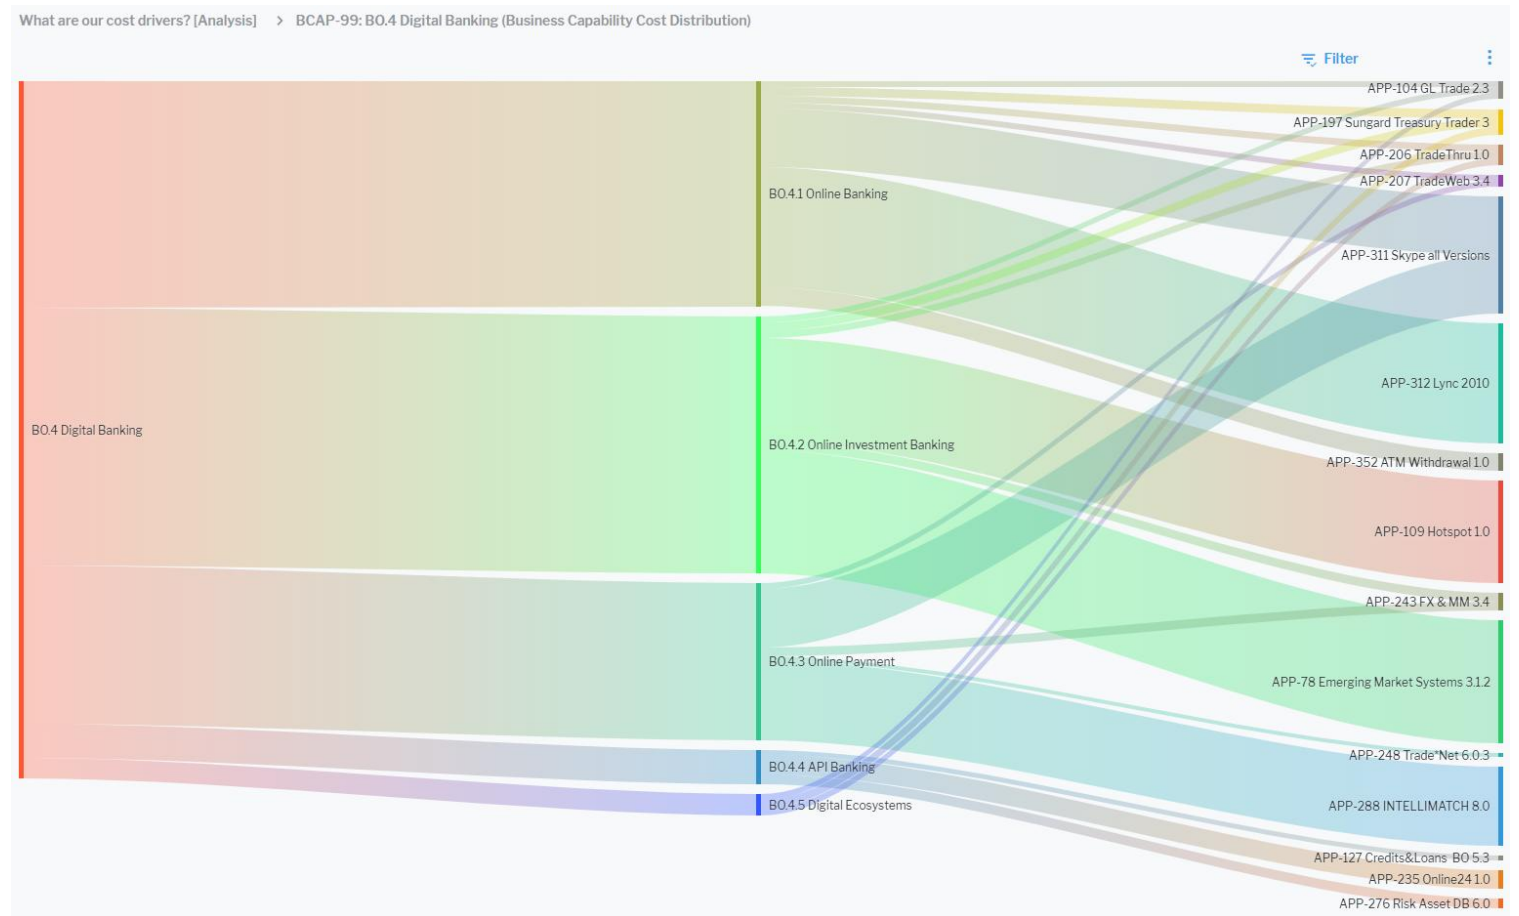

Understand funding allocation across the organization

Sankey Diagram – Project Bucket Spend

- Project spend buckets are connected to individual organizations in an easy-to-read diagram to quickly understand financial relationships
- Connection widths represent the allocation volume
- Understand how budgets are distributed, identify major cost drivers, and spot spending imbalances or concentration

Required extension package:

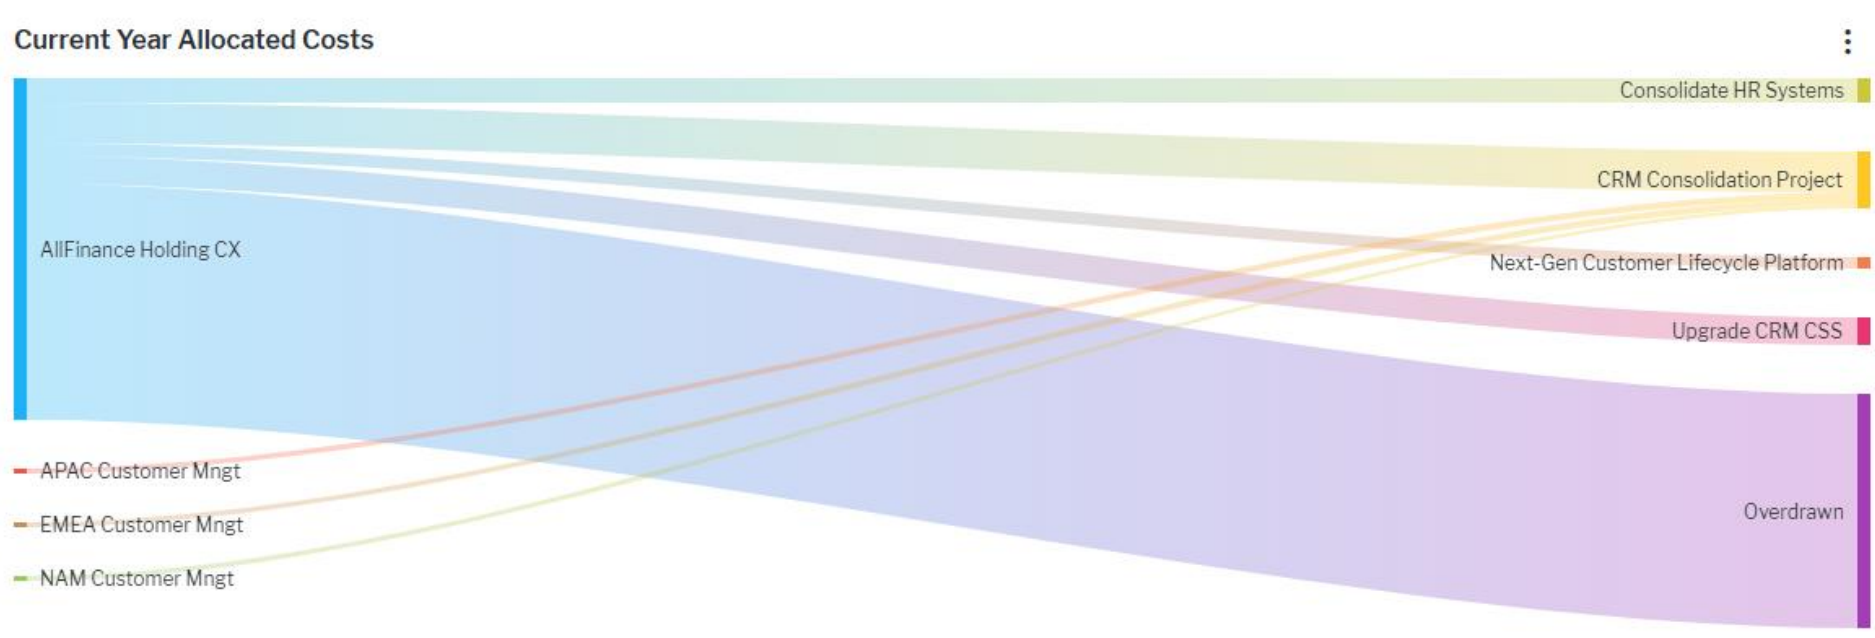

- “Strategic Portfolio Management” with an activated “Investment Optimization” use case

Understand funding allocation across the project portfolio

Sankey Diagram – Current Year Allocated Costs

- Organizational project spend buckets are connected to individual project budgets in an easy-to-read diagram to quickly understand budget allocation
- Connection widths represent the allocation volume
- Understand which project buckets fund specific initiatives, identify major contributors and single out high-impact investments

Required extension package:

- “Strategic Portfolio Management” with an activated “Investment Optimization” use case

Improve transparency into SLA expectation and commitments

Enhanced SLA Specification

- Automatic addition of SLA page to content area of business and support services
- All SLA-related information in centralized, comprehensive view
- Includes related services, defined service uptime, validity periods, planned maintenance window, incident-related information and KPIs e.g., availability, backup frequency, responsiveness and security breach alert timelines
- Align understanding of SLA commitments between providers and consumers

Business Services > BSVC-7: Customer Relationship Management 1.1 [SLA] None

Overview **SLA** Financials Business Context More ▾

Analysis View ▾ + New ▾ Edit SLA ▾ Relations ▾

Availability ⋮
Av 2-At least 98%
The amount of time in percentage (%) that the service is available for use by the consumers between the defined uptime hours.

Backup Frequency ⋮
Bf 4-More than every 8 Hrs
The frequency in hours guaranteed by the service provider to backup the service data.

Responsiveness ⋮
Re 2-Less than 30 Min
The average time in minutes that it takes for an issue to be answered by the service desk of the service provider.

Security Breach Alert ⋮
Se 5-Less than 4 Hrs
The number of hours that the service provider has to alert its customers who consume the service of a security breach of the organization's data.

Monitor financial performance of the whole project in one dashboard

New Project Portfolio Finance Dashboard

- Consolidated view across the project portfolio with aggregated finance data from all projects
- Calculates and presents key indicators:
 - **Revenue** – all project benefits for the current year
 - **Cost of Goods Sold** – all costs assigned to COGS cost type
 - **EBITDA** – total benefits minus total costs
 - **Gross Margin** – ratio of total benefits and COGS
 - **EBITDA Margin** – total benefits divided by EBITDA
- Understand revenue generation, cost structures and profitability trends across the project portfolio

Thank you.
